### **1.0 INTRODUCTION**

1.1 Research Background	1
1.2 Goal	2
1.3 Objectives	3
1.4 Problem Statements	3
1.5 Scope of Study	5
1.6 Definition of terms	6
1.7 Research Methodology	7
1.7.1 Approaches to Data Collection	
1.7.2 Methods of Data Collection	8
1.7.2.1 Literature review	9
1.7.2.2 Case Study	9
1.7.2.3 Data Collection	9
i. Questionnaires	10
ii. Interviews	10
iii. Observations	11

iv. Photograph Analysis	12
1.7.2.4 Data Analysis	12
<b>CHAPTER 2</b>	
<b>2.0 RESEARCH TOPIC</b>	
2.1 Introduction	14
2.2 The Meaning of Pedestrian and Pedestrian Circulation	14
2.3 Accessibility and Barrier free Design	16
2.3.1 Basic Guidelines of an Accessible Route	17
2.3.2 Barrier-free Design	20
2.4 Access Audit	
2.4.1 Introduction	22
2.4.2 Definition of Access Audit	23
2.4.3 Access Audit for Schools	24
2.4.4 Importance of Access Audit in Buildings	25
2.4.5 Physical Barriers Consideration in the Audit	26
2.5 The Meaning of Users and Fundamentals of Safety Design	28
2.5.1 Criteria of Pedestrian Safety and Security	29
2.5.1.1 Safe Routes	29
2.5.1.2 Entrances and Exits	30
2.5.1.3 Outdoor Lighting	31
2.5.1.4 Floor Finishes	32
2.5.1.5 Stairways	35
2.6 Basic Considerations of Safety of School	36

2.7 Reference Studies	38
2.7.1 Introduction	38
2.7.2 Entrances	39
2.7.3 Front Door	40
2.7.4 School Office	40
2.7.5 Staffs Office and Rooms	41
2.7.6 Playground and Outdoor Spaces	42
2.7.7 Playground Access	44
2.7.8 Courtyard Access	44
2.7.9 Teaching Spaces	45
2.7.10 Induction Loops	47
2.8 Guidelines for an Access Audit	47
2.8.1 School Entrances and Exits	47
2.8.2 Parking Spaces	48
2.8.3 Planting	48
2.8.4 Circulation	49
2.8.5 Outdoor Lighting	49
2.8.6 Pathway Surfaces	50
2.8.7 Signages	50
2.8.8 Items on Footpaths and Pathways	51
2.9 Steps for Access Audit for School	51
2.10 Conclusion	54

**CHAPTER 3**

**3.0 CASE STUDY AND DATA ANALYSIS**

3.1 Introduction	56
3.2 Case Study 1: Sekolah Rendah Kebangsaan Putrajaya 1, Precinct 8	57
3.2.1 Pedestrian Access Audit at Sek. Ren. Keb. Putrajaya 1	58
3.2.1.1 School Entrances and Exits	60
3.2.1.3 Parking Areas	62
i) Car Parking	63
ii) Motorcycle and Bicycle Parking	64
3.2.1.4 Pedestrian Signages	66
3.2.1.5 Pedestrian Walkway	67
3.2.1.6 Assembly Area	69
3.2.1.7 Drop-off Area	70
3.2.1.8 Seating and Dustbin	71
3.2.1.9 Exercise @ 'Fit-care' Area	73
3.2.1.10 Stairways	74
3.2.1.11 Planting	75
3.3 Case Study 2: Sekolah Rendah Kebangsaan Khir Johari, Sungai Petani, Kedah	77
3.3.1 Pedestrian Access Audit at Sek. Ren. Keb. Khir Johari	78
3.3.1.1 School Entrances and Exits	78
3.3.1.2 Parking Area	79

## ACKNOWLEDGEMENT

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

*"In the name of Allah s.w.t, The Most Gracious and Most Merciful."*

Alhamdulillah, syukur and thanks to Allah s.w.t, for He had given me the strength and capability to finish this Topical Studies on 'Pedestrian Access Audit at Primary School; A study on user safety'.

First and foremost, I would like to take this opportunity to thank my dearest parents and family for their love and eternal support in everything that I do.

I would also like to extend my deepest gratitude to Mdm. Mazlina bt. Mansor, my supervisor for ALA 3200 Topical Studies for her valuable guidance and bountiful knowledge and helping me to develop my ideas in managing this task.

My special thanks goes to the staff at Sekolah Rendah Kebangsaan Putrajaya 1, Precinct 8 and also the staff at Sekolah Rendah Kebangsaan Khir Johari, Sg. Petani, Kedah for helping me in giving lots of valuable information that really assisted me in completing this research paper.

A very special thank to all my friends especially 3<sup>rd</sup> year Landscape Architecture students for their numerous assistance during my research. Without their invaluable inspiration, continued encouragement, support and advice, this research paper will not be completed.

Finally, lots of appreciation to those who was involve direct or indirectly in this research. Thank you. Wassalam.

**ABSTRACT**

---

---

**ABSTRACT**

Schools, by nature of their occupancy and use, require higher standards of safety than other types of buildings. Users will demand that provision be made for a safe environment especially for school children. Thus, access audit is required in every school in order to produce safe school for all users. Access audit is a physical investigation or inspection of an already existing access, building or spaces. The ultimate goal of this study is to discover the optimum safety requirements for users in primary schools. Therefore, the objectives are to know the level of safety for primary school, to identify problems faced by users regarding access then give solutions to the problems in order to enhance the level of safety in primary schools. Two schools in urban area were selected and several problems had been identified regarding access provided inside and within the school's compounds. Mainly, users are facing access problems such as inappropriate width of main entrance and exit, no proper pedestrian walkways, signages, drop-off area for students and no proper access to parking areas. Thus, in order to improve safety condition of access in schools, there are certain guidelines such as appropriate width of main entrance and exit, proper pedestrian walkways with non-slippery materials, suitable materials for signages and proper access to drop-off area and parking areas should be taken into consideration. This would result in inviting, comfortable and safe environment for students, staff and other users and thereby creating a conducive learning environment at the schools.

# LIST OF FIGURES

---

---

## LIST OF FIGURES

### CHAPTER 2

**Figure 2.1** Footpath must be kept at a distance from buildings and pedestrian routes must be clearly defined.

**Figure 2.2** Lighting patterns can help to insure the safety of pedestrians.

**Figure 2.3** Walkway lights help to provide a sense of security.

**Figure 2.4** Handrail had been used to indicate descent and change of colour or material at the top of the stairways helps to increase safety.

**Figure 2.5** Detail configuration of stairway.

**Figure 2.6** If the accessibility of these premises were improved, everyone would benefit.

**Figure 2.7** There is a dropped kerb at the entrance to the school.

**Figure 2.8** No designated parking spaces for people with disabilities.

**Figure 2.9** The front door step and the raised sill are serious obstacles for many people such as wheelchair users and parents with children in pushchairs.

**Figure 2.10** Chairs with arms would be useful for people who are frail. Adjustable blinds on the windows would give protection from glare.

**Figure 2.11** The temporary building has a ramp which should be replaced.

**Figure 2.12** Most of the playground is accessible for people with disabilities but there are problems with access into the buildings.

**Figure 2.13** Level paving and covered seating are useful features at the school.

**Figure 2.14** Most of the doorways have a step up into the building.

### CHAPTER 3

**Figure 3.1** Signage showing name of the school located beside the main entrance.

**Figure 3.2** Location map of the school.

**Figure 3.3** Signage shows detail plan of school area.

**Figure 3.4** Plan analysis of pedestrian circulation inside school compound.

**Figure 3.5** Outward view of the school's main entrance.

**Figure 3.6** There is a security post located near the entrance gate.

**Figure 3.7** The school exit is easily accessible from the main road.

**Figure 3.8** View towards the exit for students.

**Figure 3.9** Parking space for disabled users located near the building entrance.

**Figure 3.10** Direct walkway provided from parking space to the corridor.

**Figure 3.11** View towards parking spaces for parents and visitors.

**Figure 3.12** Concrete cellular turfgrid paving are used to absorb water as well as to prevent from flood.

**Figure 3.13** Two-way routes had been provided at the parking area for smooth circulation flow.

**Figure 3.14** Parking area for school's staff located near to the main building.

**Figure 3.15** Another parking space provided for staffs at the back of main building.

**Figure 3.16** View towards the motorcycle parking area.

**Figure 3.17** Bicycle parking complete with bike racks provided for users convenience.

**Figure 3.18** Sharp edges on the top of bike rack can cause harm to users.

**Figure 3.19** Bike racks provided for students to keep their bikes safely.

**Figure 3.20** Flat surfaces without noticeable changes on grading of the surface help to ensure safety of users.

**Figure 3.21** The non-covered drain become hazard to users.

**Figure 3.22** Clear signage provide useful information to users.

**Figure 3.23** Contrast colour had been used to capture human's eyes.

**Figure 3.24** Example of signage provided at student's exercise area.

**Figure 3.25** Simple and clear fonts are used in order easier for users to read.

**Figure 3.26** Trees are trimmed above 1.5 m from the ground to prevent users from any hazard.

**Figure 3.27** Drain and manholes along the walkway are covered to ensure safety of users.

**Figure 3.28** Metal steel grill cover had been used for the drain grating.

**Figure 3.29** Different colours are used to differentiate between road and pedestrian walkway.

**Figure 3.30** View towards covered walkway near the main hall.

**Figure 3.31** Good condition of pedestrian walkway which is free from hazard make users comfortable and safe to walk on it.

**Figure 3.32** Zebra line has been provided to indicate pedestrian crossing.

**Figure 3.33** Clear pathways to direct users throughout the site.

**Figure 3.34** View towards the assembly area.

**Figure 3.35** Concrete framed structure with tiles finish are used for the stage.

**Figure 3.36** View towards drop-off area for students.

**Figure 3.37** Seatings are provided along the drop-off area for the ease of users.

**Figure 3.38** Concrete stump dividers function as a limit area for the bus.

**Figure 3.39** 45 degree types of parking spaces provided for school buses at drop-off area.

**Figure 3.40** Seating and dustbin provided along the walkway for users' convenience.

**Figure 3.41** Wooden benches are used at the assembly area.

**Figure 3.42** Dustbin covered with stainless steel located in between two benches.

**Figure 3.43** Suitable heights for seating and rubbish bin for children.

**Figure 3.44** View towards the exercise area.

**Figure 3.45** Rubber mat are used to prevent users from slippery.

**Figure 3.46** Rounded edges to avoid users from any injury.

**Figure 3.47** View toward the stairways.

**Figure 3.48** Groove finish surface which function as anti slip components ensure safety of users.

**Figure 3.49** One of the stairways located near school field.

**Figure 3.50** Inappropriate setting of the stairs can cause harm to users.

**Figure 3.51** Roystonea regia had been planted along the road to provide clear views to users.

**Figure 3.52** Palm trees planted at seating area give aesthetic value instead of provide shade to users.

**Figure 3.53** Line of trees planted at parking area to provide shade to users.

**Figure 3.54** Trees are trimmed accordingly as not to create barriers to users.

**Figure 3.55** Plan analysis of pedestrian and vehicular circulation inside and within the school compound.

**Figure 3.56** The gate are closed during school holidays for security purposes.

**Figure 3.57** School exit had been used by staffs and students.

**Figure 3.58** View towards the parking area.

**Figure 3.59** Signage provided along the road indicate names of Allah.

**Figure 3.60** Clear signage indicate the school's name.

**Figure 3.61** Signage function to provide useful information to users.

**Figure 3.62** Detail dimension of seating.

**Figure 3.63** Reticulated roots at seating area can cause harm to users,

**Figure 3.64** Some of the benches had fungus on the top of its surface due to lack of maintenance.

**Figure 3.65** Walkway to the building is defined by hedges.

**Figure 3.66** Mild steel step drain cover is used for safety purposes.

**Figure 3.67** View towards the corridor near school canteen.

**Figure 3.68** The drain is not fully covered and can cause harm to users.

**Figure 3.69** View towards covered walkway to resting area.

**Figure 3.70** Non-covered drain affect safety of users.

**Figure 3.71** Inappropriate setting of walkway.

**Figure 3.72** No proper pathway provided to direct users to the resting area.

**Figure 3.73** Sharp edges at each of the stage's corner can cause harm to users.

**Figure 3.74** Elevation view of the grade changes occurred between stage and floor surface.

**Figure 3.75** Big trees function to provide shade to users.

**Figure 3.76** Shrubs along the roadside are trimmed properly as not to obstruct user's view.

## **CHAPTER 5**

**Figure 5.1** Exterior accessible route designations.

**Figure 5.2** Exterior accessible routes.

**Figure 5.3** Provide separate parking for staffs, parents and visitors.

**Figure 5.4** Example of signage and symbol indicating facilities and its direction.

**Figure 5.5** International symbol of access for disabled persons.

**Figure 5.6** Configuration of steps.

**Figure 5.7** Handrail on a stairway.

# CHAPTER 1

---

## CHAPTER 1

### 1.0 Introduction

Access is a way of approaching or reaching to a certain place. It plays an important role in connecting people to a certain location. Besides, it acts as linkages between indoor and outdoor spaces. Furthermore, it also acts as an intermediate space to direct people to a certain place. The purposes of the access are to link and direct people to a different places or locations. The access relate to the human circulation which is the flow or movement of people. In this context, it relates with the concept of ergonomics. Ergonomics is the study of the interaction between people, equipment, and systems in their (work) environment. Besides, it is also defined as the study of how the workplace relates to human functions (Hyper Dictionary, 2003). Something is ergonomically design, if it is optimized to fit people. This means taking account of differences such as size, strength and ability to handle information for a wide range of users. Then the tasks, the workplace and tools are designed around these differences. The benefits are to improve efficiency, quality and job satisfaction (Kwaliteg's Web Site, 2003).

Another factor that relates to the ergonomics is access audit, which is a part of ergonomic. An access audit is a structured approach to accessibility, giving information which, if used intelligently, can point to improvements which will not surface using an ad-hoc approach, and opportunities which can reduce the overall cost

of improvements which may make them affordable (Dennis Fearn, 1995). Furthermore, it is the first "reasonable step" in consideration of maximum accessibility in which will determine the grade of safety of a building or space. The purpose of an access audit is to establish how well a building or a space performs in relation to access and ease of use by a wide range of potential users. It identifies good and bad practice, design and layout in regard to typical and disabled access, identifying obstacles to people with mobility and sensory impairments (Design Development Associates, 2003). In addition, the audit report will then seek to find solutions to access problems, with recommendations and relative costing.

Schools require higher standards of safety than other types of buildings. Thus, the access audit is designed to assess the safety conditions in each public school. Ralph Sinnot (1985) stated that "it has not been found practicable to make recommendations for safety at different levels, in other words, to have grades of safety. However, it has been necessary to distinguish safety requirements that are specific for children and old people. It can generally be assumed that where design ensures the safety of children and old people, it will ensure the safety of other age groups."

## 1.2 Goal

The goal of this research is to discover the optimum safety requirements for users in primary school.

### 1.3 Objectives

The objectives of this research are:

- To study accessibility and users safety at different primary schools in urban areas
- To identify and evaluate the problems facing by users regarding to safety of pedestrian access provided at primary school
- To identify design solutions for optimum safety of users by proposing guidelines and recommendations.

### 1.4 Problem Statements

“At the very heart of every research project is the problem. It is paramount in importance to the success of the research effort, and it should be so considered by every researcher.” (Paul D. Leedy, 1995)

From his interpretation, it can be concluded that research must begin with the problems that need to find the solution to solve the problems. After the problem had been identified then the research can be done successfully. The problem identification is the first requirement in the research process. This research is conducted in order to identify and evaluate the problems facing by the users regarding safety of pedestrian access provided at primary school. Therefore, several sub-problems had been recognized in this study;
