AUGUST 2012

ABSTRACT

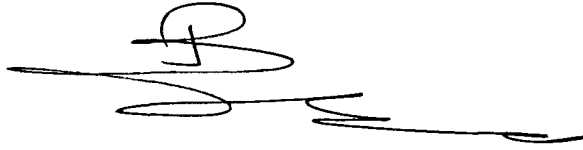

This era of globalization has generated unprecedented challenges for the companies in the market place, where the competition is now being waged between supply chains and not confined to only between companies any more. The conventional business models must, therefore, integrate an array of activities across the supply chains; this, however, calls for an effective knowledge transfer to the appropriate employees across the organizations. Due to its technological nature, the pharmaceutical industry is intimately involved in the adoption, generation and preservation of knowledge; thus for the strategic initiatives to bear fruits in this competitive business landscape, effective knowledge management across different entities of the supply chain is of utmost importance. The current research examines, from managerial perspective, the impact of supply chain management (SCM) and knowledge management (KM) practices on business performance among drug manufacturers in the pharmaceuticals industry of Bangladesh. In so doing, it explores the interrelationships among the above three constructs of the proposed model that incorporates two other mediating ones, namely, business competitiveness and customer satisfaction. For this purpose, a questionnaire containing fifty five statements, besides those of demographic and general information of the companies, is provided to the managers working in different pharmaceutical companies. In order to ensure the reliability of the measurement scales of the underlying constructs as well as the readability of the statements, a pilot study is performed. A total of three hundred and four managers have participated in this survey with a response rate of fifty eight percent. Structural equation modeling (SEM) is employed as the principal data analysis technique using software AMOS version 16.0. The findings of the study demonstrate that out of ten research hypotheses, five are validated with customer satisfaction fully mediating between the two antecedents, namely, SCM and KM practices and the two consequences, namely, business competitiveness and business performance. Five competing models are put forward and compared with the baseline model, the revised research framework. The study also performs two structural invariances and finds that although the managerial positions of the executives exert moderating influence on the baseline model, their boundary-spanning roles do not. The theoretical implications of the study call for adopting systems thinking theory and theory of constraints, where the current approach of cost minimization is to be supplanted by that of throughput maximization, with each entity considering its profitability being contingent upon that of the whole supply chain. The policy recommendations of the study vis-à-vis the industry relate to a host of issues: shrinking the current large supplier base, recognition of purchasing as a strategic weapon, considering the business operations from a holistic perspective and tailoring the IT infrastructure to the needs across the supply chain, the paramount importance of top management commitment and imparting of training, instituting benchmarking practices and rewarding the executives based on their know-how and for knowledge sharing in the performance appraisal process. The study concludes with a few limitations and suggestions for future research.

خلاصة البحث

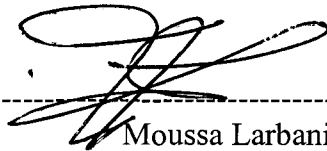

في هذه الحقبة من العولمة برزت تحديات للشركات في السوق، حيث ان المنافسة الحقيقية الآن هي بين سلاسل التوريد وليس على الشركات. لذلك فان على الأعمال التقليدية دمج مجموعة من الأنشطة عبر سلاسل التوريد، وهذا يدعو إلى نقل المعرفة الفعالة للموظفين ذات الصلة عبر المنظمات. ان صناعة المستحضرات الصيدلانية تشارك بشكل وثيق في تبني والمحافظة على المعرفة، وبالتالي عن المبادرات الاستراتيجية لتؤدي ثمارها في هذا المنافسة التجارية. ان البحث الحالي يدرس، من وجهة نظر الإدارة تأثير إدارة سلسلة التوريد وإدارة المعرفة في أداء الأعمال بين الشركات المصنعة للدواء في صناعة المستحضرات الصيدلانية في بنغلاديش. للقيام بذلك يجب ان استكشاف العلاقات المتبادلة بين الثوابت الثلاثة المذكورة أعلاه من النموذج المقترح الذي يشتمل على اثنين آخرين ، وهما القدرة التنافسية ورضا العملاء. لهذا الغرض، استبيان يحتوي على خمسة و خمسون عبارة، الى جانب تلك المعلومات الديموغرافية والعامية للشركات، وتقدم إلى المديرين العاملين في شركات الأدوية المختلفة من أجل ضمان موثوقية المقاييس و سهولة قراءة البيانات، تم تنفيذ دراسة تجريبية. وقد شارك ما مجموعه ثلاثة منه و اربعة مديرين في هذه الدراسة مع معدل الاستجابة يصل الى ثمانيه و خمسون بالمائه. و استخدمت معادله نمذجة الهيكلية (SEM) لتحليل البيانات الرئيسي وذلك باستخدام برنامج (AMOS 16.0). النتائج التي توصلت إليها الدراسة أن من أصل عشرة فرضيات البحث، فان خمس صحيحة مع رضا العملاء بشكل كامل من وساطة بين السوابق، وهما، المجلس الاعلى للقضاة والممارسات كم والعواقب، وهما، والقدرة التنافسية التجارية وأداء الأعمال. وضعت خمسة نماذج المتنافسة إلى الأمام، وبالمقارنة مع النموذج الأساسي في إطار الأبحاث المنقحة. الدراسة يجري أيضا اثنين من تفاوت في الهيكلية، ويرى أنه على الرغم من وظائف إدارية من المديرين التنفيذيين ممارسة الاعتدال تأثير على نموذج خط الأساس، وعلى الحدود، التي تمتد أدوار لا تفعل ذلك. آثار النظرية من الدراسة تدعو تبني نظم تفكير نظرية ونظرية القيود، حيث النهج الحالي في عملية تخفيض الكلفة هو أن تحل محلها تعظيم الإنتاجية، مع كل كيان النظر في وحدتها الربحية على أن يكون من سلسلة التوريد بأكملها. توصيات السياسة العامة لصناعة الدراسة وجها لوجه وتتعلق مجموعة من القضايا: الانكماش الحالي قاعدة مورد كبير، تقديرا لشراء كساح استراتيجي، والنظر في العمليات التجارية من منظور شامل وتكييف البنية التحتية لتكنولوجيا المعلومات والاحتياجات عبر سلسلة التوريد، على الأهمية القصوى للالتزام الإدارة العليا وتلقين التدريب، وتأسيس ممارسات القياس ومكافأة المديرين التنفيذيين على أساس مدى المعرفة وتقاسم المعرفة في عملية تقييم الأداء. وتخلص الدراسة مع عدد قليل من القيود واقتراحات للبحث في المستقبل

ACKNOWLEDGEMENTS

First and foremost, the author would like to pay his infinite gratitude to the Almighty Allah (swt.) for bestowing His blessings on him to sustain the rigors of this PhD. journey of his to its desired completion. It is Him, Who assisted the author in his best of times, and it is Him, Who held his nerve whenever he was found wanting in his most trying times. In all humility, the author thus prostrates himself in absolute submission to Him and to His exalted glory.

The author expresses his profound gratefulness to his supervisor Professor Dr. Rafikul Islam for providing him with invaluable suggestions and guidance at every stage of his PhD research. His prompt response in offering insightful comments, in going through numerous drafts of the manuscript, and in weeding out the redundancies in them is most gratefully acknowledged. The author offers his genuine thankfulness to his co-supervisor Professor Dr. Moussa Larbani, his two examiners, Dr. Noor Hazilah and Dr. Suhaiza Hanim, and coordinator of PhD. Program, Dr. Azura Omar, whose critical comments in improving the thesis contents on many an occasion, post-defense in particular, did a world of good to him. In this regard, the author acknowledges with immense gratefulness the genuine concern attached to him by Dr. Mustafizul Karim, who not only lent him a ready hand, a caring heart and the most pleasant demeanor in navigating the rough waters of a PhD. life, but also offered his generous inputs in upgrading the contents of various chapters of his dissertation.

The author extends his most sincere appreciation to those personnel working in different companies in the pharmaceutical industry of Bangladesh who took their precious time to take part in this survey research. But for their help, this thesis would not have seen the light of the day. In this regard, the author gratefully recalls the enormous help offered him by his colleagues Mr. Shamsad Ahmed and Ms. Sharmin Shamaly in securing contacts with top managers in those companies. The prompt help of Dr. Sohel-uz-Zaman in getting access to prior literature surveys deserves particular mention. Besides, the author records his heart-felt gratitude to his much amiable departmental colleagues back home, whose best of wishes held him in good stead. A very special note of gratitude is reserved for Afia Muqtadir, whose soul-soaked feelings for the author remains ever so priceless to him; may Allah profusely bestow His glad tidings upon her and her family. .

The author remembers, with much fondness, his two wonderful sisters –Apu (Zakia) and Moyna (Ratul) – for their deepest concern for their only brother in this arduous journey of his. Sincere gratitude is due to Dr. Shahida Begum, Dr. Aminul Islam and Dr. Salam Akanda for their best of wishes for the author. The author is also indebted to all his classmates and friends, particularly, Dr. Adewali Abideen, Dr. Wahibur Rokhman, Br. Nasser Alareqe and Dr. Tahir Jan for their valuable assistance in doing SEM analysis; Sister Rohamah and Br. Azrin in formatting and printing of the thesis; and his PhD. compatriots, Br. Fouad bin Amin, Br. Sirazul Islam, Br. Sayed Uddin, Br. Sakeeb Ferdous and Br. Forbis Ahamed for their unstinted moral support.

Last but always the most, it is his parents – Professor Dr. Anwarul Haque and Umme Hasin Monowara – whose hearts incessantly issue forth a steady stream of prayers that help him endure, with much fortitude, the agonies of his solitary sojourn in his PhD. pursuit. The author remains in eternal debt to them; may Allah bless them with handsome dividends, and seal their place in the best of Heavens. Ameen.

CHAPTER ONE

INTRODUCTION

1.1 BACKGROUND OF THE STUDY

The world, metaphorically and yet so cogently argued by Friedman (2007), has turned ‘flat’, thanks to the onslaught of globalization. While it has blurred the geographical divides, it has as well, as its corollary, spawned fierce competition among the companies in the marketplace. The competitive edge of a company over its rivals is hinged heavily on its ability to cope with multiple challenges to rein in cost, enhance product quality and offer superior customer service (Lei, 2007). Shaped by sweeping technological innovations and shifting customer demands, this competition has pitted the companies against each other, so much so that the key to their survival is contingent upon obtaining the products/materials from the right source or suppliers, at the right price, with the right quality and quantity and in real-time (Onesime *et al.*, 2004). This calls for a doing away with the conventional business practices on their part in order to be more nimble, in a bid to garner the benefits of what Sull (2009) calls ‘the upside of turbulence’. A very compelling reason for this is attributed to the fact that the competition is now being waged between or across supply chains, and not confined to only between companies any more (Seth *et al.*, 2006; Fynes *et al.*, 2005; Vickery *et al.*, 2003).

Given the unprecedented changes taking place at an exponentially faster rate in the arena of information technology, traditional business models must harmonize an array of activities across the supply chains to suit the demands of the fast-changing business environment. In so attaining, integration, however, calls for an effective

transmittal of knowledge amongst the individuals within the firm (Pagell, 2004; Sanders and Premus, 2005). Notwithstanding the radical advancement of technological prowess vis-à-vis knowledge transfer between individuals (Narasimhan and Kim, 2001; Zhou and Benton, 2007), effective communication would fall through if it is done only over phone or through e-mails or with scattered reports (Choo *et al.*, 2007). This is majorly due to the fact that knowledge, which is so specialized in nature, could carry a distinct or no meaning to people working in different functional departments. It does, therefore, warrant a shared understanding of knowledge (Zahra and Nielsen, 2002), through which disseminated information would appear meaningful to the appropriate employees across the organization (Slater and Narver, 1995; Baker and Sinkula, 1999). This, according to Luo *et al.* (2006), would facilitate effective knowledge transfer, and aid the employees from getting inundated in what Goldratt (1991) coins as ‘Haystack Syndrome’, in ‘sifting information out of the data ocean’.

The pharmaceutical industry caters to the healthcare needs of a country – developed or developing. The innovation of new drugs and their distribution have been instrumental to the significant rise in longevity of the human race over the past century (Rao, 2008). However, as the pharmaceutical marketplace confronts daunting challenges with various stakeholders demanding the pharmaceutical products to be affordable, strategic planning would be of the essence (Holdford, 2005; Birdwell, 1994). For the pharmaceutical industry, it assumes special significance as medical commodities would require to be delivered through the supply chain, one of the aims of which is to guarantee a continual flow of drugs to consumers at a reasonable price, with minimal postponements and stockouts, with zero allowance for defects, and to their full satisfaction (Vecchione, 2009; Enyinda, 2009).

Due to its technological nature, the pharmaceutical industry is intimately involved in the adoption, generation and preservation of knowledge, with research and development playing a crucial role in the entire process. The current competitive business landscape demands a continual probing into the environment so that knowledge is garnered and disseminated promptly, to the appropriate personnel throughout the supply chain. For the strategic planning to bear fruits, effective knowledge management across different entities of the supply chain is of utmost importance as it helps the pharmaceutical industry acquire core knowledge and gain a competitive edge (Hung *et al.*, 2005).

With the above background, this research examines the influence of the supply chain management (SCM) and knowledge management (KM) practices on the business performance (BP) of drug manufacturers in the pharmaceuticals industry, with that of Bangladesh being taken as a case study. In doing so, it explores the interrelationship between the two antecedents, i.e., SCM and KM practices, and measures their impact on organizational outcomes i.e., business competitiveness, customer satisfaction and business performance of the pharmaceutical companies in Bangladesh.

The next section presents the pharmaceuticals industry landscape giving an overview of the Bangladesh pharmaceuticals industry, the statement of the problem of the current study and its significance followed by the research questions and objectives to be pursued in this study. However, first, a brief outline of the Bangladesh health sector vis-à-vis public health expenditure as well as people life expectancy is provided below.

1.2 HEALTH SECTOR OF BANGLADESH

Since independence in 1971, Bangladesh did not have any coherent policy vis-à-vis its health sector until 2000, when the first National Health Policy came into being (Chowdhury and Osmani, 2010). Prior to this, a number of *Five Year Plans* were introduced to address the problems that plague this sector; such plans would envisage actions geared toward public and private sector participation to impart healthcare services to the people, with an emphasis placed on primary as well as maternal and child health care. In order to facilitate these healthcare services, focus is given to the construction of community clinics for every 6000 people. Table 1.1 provides public health expenditure per capita during the last three decade (1981 – 2010).

Table 1.1
Public expenditure on health, on average (1981 – 2010)

Total expenditure on health	1981-1985	1986-1990	1991-1995	1996-2000	2001-2005	2006-2010
At constant prices (Taka ^a) per capita	62	67	107	137	155	212
At Dollar prices per capita	1.20	1.46	2.46	3.16	3.41	5.22
As a percentage of total budgetary expenditure	5.21	5.09	6.79	6.83	6.23	6.66

Source: Bangladesh Bureau of Statistics, Statistical Yearbook, various years; Ministry of Finance, Bangladesh Economic Review, various years (as cited in Chowdhury and Osmani, 2010)

^aTaka: Currency in Bangladesh

As can be inferred from Table 1.1, per capita public expenditure over a period of three decade (1980 – 2010) has increased by almost three-and-a-half times, from a yearly average of Tk. 62 per person to Tk. 212 per person. In dollar terms, this shows an even higher annual increase, from \$1.2 per person to \$5.22 per person over the corresponding period. While the increase shows an upward trend, the absolute figure of expenditure seems quite paltry. This low absolute amount is as well reflected in the allocation of funds to public health sector as a percentage of total budgetary expenditure.

Against this situation, Bangladesh has, however, gained some progress in meeting targets of Millennium Development Goals (MDG) by 2015. There has been a significant decline in infant and child mortality resulting in an increase in life expectations of the people. Table 1.2 exhibits life expectancy at birth along area and gender divide.

Table 1.2
Life expectancy at birth in terms of gender and location (2001 – 2010)

Year	Life expectancy at birth			
	Urban	Rural	Male	Female
1991	65.0	55.8	55.7	56.5
2001	67.2	60.2	64.0	64.5
2002	67.6	64.4	64.5	65.4
2003	67.8	64.3	64.3	65.4
2004	67.9	64.3	64.4	65.8
2005	68.0	64.6	64.4	65.8
2006	68.1	66.0	65.4	67.8
2007	68.3	66.2	65.5	67.9
